

# ALTAIR OSM Kit

## Gas Dryer

ALTAIR OSM kit is a system to control and to reduce the humidity in the sample.

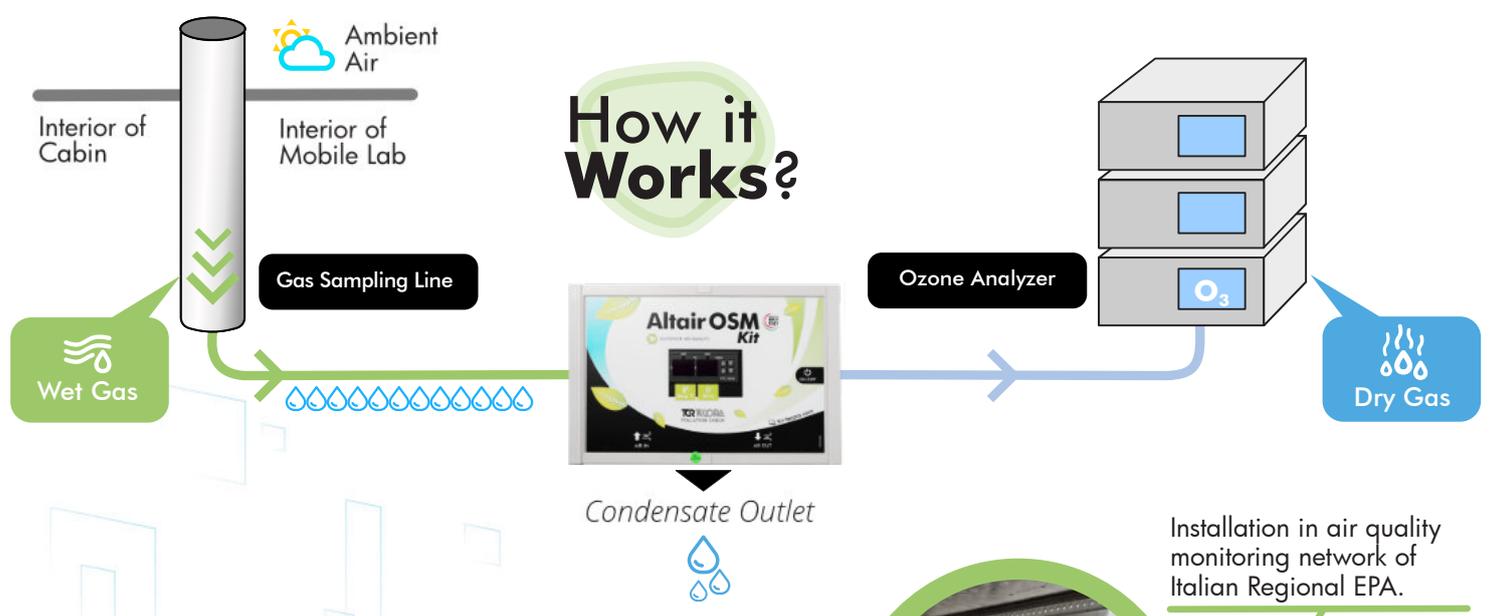

The sample to analyze is taken out from a gas sampling line, it passes through the ALTAIR OSM kit by a connection in series to the sampling line.

The sample inside the system is dried by OSM technology, and the parameters are visualized on the display. Sampling humidity and temperature are showed on the LCD display.

ALTAIR OSM kit is adjustable for every gas sampling line. Connection for PTFE tube 6x4 mm.

**Altair OSM kit is adaptable to all gas sampling lines.**  
Connection for 6 x 4 mm PTFE tube

It is well known that errors in measurement occur in some period during the year due to condensation into the sampling tube of analyzer.

In some case the reduction of measurement respect real concentration can be 50%.

**OSM KIT** prevent condensation, thus ensuring accurate measurements.

Installation in air quality monitoring network of Italian Regional EPA.
